

Results Base QRTag

As suggested by Results Base, it's probably a good idea to store your personalised link page (the email they sent you) as a bookmark on your smart phone as this will take you straight to the web page you need to be on to scan the Start and Finish tags. All phones are different in the way they bookmark things, but Google will show you how if you don't know.

If you've already had a look, you'll see something like this, which explains what to do if there's no phone signal at the start or finish in order to record your time. The section at the top in blue where it says Scan QR Code, is the section you'll eventually need to scan when the event is 'live'. It goes live at 0600hrs on Friday 9th for 3 days.

The screenshot shows the 'Participant (#9998)' section with details: Name: Second Dummy, Race: Raw Running, Distance: 10k, Current Time: 31.18, and a 'View certificate' link. Below this is a 'Result' table:

Checkpoint	Time	Time of day
Start	00:00	19:58
Finish	31.18	19:58

The 'Scan QR code' section at the top right has a blue header and a message: 'Entering results is closed. It is possible to enter results from 9 April 2021 01:00'. Below this is a 'Help & Info' section with instructions on scanning QR codes and using the offline feature. At the bottom is an 'Upload photos' section with instructions on what types of photos are acceptable.

Then when it's live, the same page will look like this below and all you have to do is touch the green button 'Scan QR Code'. A pop up screen will then ask you to allow the app access to your images (ie you camera), which you need to agree to and then you simply scan the code and press okay. **The clock is then ticking!** If there's no mobile signal for your device at the start or finish, you can upload an image (take a picture) of the start or finish QRTag and the system will work out your time. Hopefully you won't need to do this.

The screenshot shows the 'Participant (#9999)' section with details: Name: First Dummy, Race: Raw Running, Distance: 10k. Below this is a 'Result' table:

Checkpoint	Time	Time of day
Start	-	-
Finish	-	-

The 'Scan QR code' section at the top right has a blue header and two buttons: a green 'SCAN QR CODE' button and a dark grey 'UPLOAD PHOTO OF QR CODE' button. Below this is a section for 'Insert link to external timing device (ie. Strava, Garmin, Endomondo...)' with a text input field and a 'SAVE' button. At the bottom is a 'Help & Info' section with instructions on scanning QR codes and using the offline feature.

Don't forget to bookmark the link as described above, otherwise you'll be frantically trying to find the original email at the finish while the clock is still ticking away! It's really simple, but you just need to be pre-prepared when you arrive. Most of you will also need to download and fire-up the 'Rungo app' for Sat-Nav directions, unless you're relying on the detailed maps online or know the course.

To use the live QR feature, you must grant access to use your device camera when asked. If this does not work for you, you may use the offline feature described below.

If you are offline

If you do not have cell phone coverage at the checkpoint, you can take a photo with your normal phone app, and upload it at a later time. Please ensure that the photo is clear and focused, so the QR code can be read properly when uploaded. For the best result make the QR code fill most of the frame, and take the photo directly in front of the code. Please note that iPhone/iPad does not support this feature. If you take a photo on these devices, you need to upload it from a computer later.
